

Secure AI Landing Zone Blueprint

A practical enterprise decision guide from DigiScience Techsol

ASSET TYPE: BLUEPRINT

This guide presents a reusable DigiScience Techsol delivery pattern for enterprise review and planning.

Purpose

Provide a practical blueprint for enterprise AI discovery and decision-making.

Target Buyer

CIO, CISO, cloud platform leader

Business Problem

Create a secure foundation for enterprise AI workloads.

Measurable Outcome

Define identity, network, data, logging, model access and cost controls.

Architecture View

- Business workflow intake
- Secure data source mapping
- AI service or model endpoint access
- Human review and approval step
- Audit log and quality feedback loop
- KPI dashboard for value tracking

Cloud Services

Use the equivalent services on Azure, AWS or GCP depending on the client environment:

- Identity and access management
- Private networking and secure endpoints
- Object/document/data storage
- Managed AI service or model gateway

- Logging, monitoring and cost management
- Secrets management
- Workflow orchestration where needed

Governance and Security Controls

- Role-based access control
- Data classification
- Human approval for high-risk outputs
- Prompt and response logging where permitted
- Source citation or evidence capture
- Privacy and compliance review
- Model risk and hallucination handling
- Cost and usage guardrails

Pilot Scope

- One workflow
- One business owner
- One measurable KPI
- Limited data sample
- Clear success and stop criteria
- Production scale follows successful validation and an approved operating model

Deliverables

- Current-state workflow summary
- Readiness or blueprint score
- Security and governance gap view
- Pilot architecture outline
- Success criteria and decision path
- Next-step recommendation

Assumptions

- Client provides access to sample data or process documentation.
- Stakeholders are available for short discovery reviews.
- Security and compliance constraints are reviewed before build.
- Customer-specific assumptions and evidence are confirmed during discovery.

Success Criteria

- Use case is clearly scoped.
- Business value is measurable.
- Data readiness is understood.
- Security and governance risks are visible.
- Pilot decision is clear: proceed, fix gaps, or stop.

Book a 30-minute workflow readiness discussion with DigiScience Techsol and choose one candidate workflow to score.
